# Data Centre

**Data Centers** whether supporting the needs of a single company or hosting tens of thousands of client application are essential to the flow processing and storage of information. As such they have to be extremely reliable and secure while being able to accommodate growth and reconfiguration. Your server farm is probably one of the most vital installations of your business. Apart from determining the physical location, preparing the **Data Center** requires special attention in access to power, amount of cooling, level of redundancy, setting up of pathways, strictness of security and type & capacity of media used inside.

We offer our professional services in the areas of design and implementation, **Data Center** preparation and management solution starting from very basic site preparation activities such as raised floor, false ceiling, raceways & pathways to electro mechanical components such as precision air conditioners, power and UPS, fire detection and protection of your valuable and expensive equipments,. Furthermore we have strong partnerships that focus on the data center monitoring & management applications there by extending their strength, know-how and experience to our esteemed clients.

**Bringing your Data Center  
into the IoT Era**

Data Center Infrastructure Total Solutions

# Safety Policy

The safety of our employees, and the public, is of the highest priority. It is our policy that our safety rules shall be strictly observed at all times. Although these rules are to be considered very important, it is impossible to publish a rule that covers every circumstance. If a rule that might cover a specific hazardous condition has been omitted, that shall not be an excuse for disregard of common sense in the safe performance of our work. Maintaining excellence in the safety of the work being done is a primary requirement not only for wellbeing of the personnel engaged in construction work but also for the benefits that accrue through higher moral and the expedition of the construction time of a project. It is for this reason, a safety program is formulated.

Accident prevention shall be considered of primary importance in all phases of operations and administration. The management has put forward some safety policies. The policy insists to maintain open communication between management and staff on matters pertaining to safety. All employees are encouraged to express their concerns or suggestions to help promote safe work practices and conditions. Safety and accident prevention is everyone's responsibility. The management has always been showing keen interest on the safety policy. The reason is just the dedication of the tier 2 level peoples to the company is in such a way; and the management will thus be forced to provide some luxuries in terms of safety policy.

Promote a positive attitude towards accident prevention.

- Outlining the training and competence required to prevent occupational hazards.

Establish and insist upon safe work practices and conditions

Following safe work practices, preventing injury and ill health, and continually improving the effectiveness of system.

- Provide appropriate supervision, training, and monitor conformance to quality standards.
